

Toyota Camry Hybrid Electric Vehicle Accelerated Reliability Testing October 2006

Two model year 2007 Toyota Camry hybrid electric vehicles (HEVs) entered Accelerated Reliability testing during July 2006 in one fleet in Arizona. After reaching 160,000 miles each, the two Camry HEVs will have their fuel efficiencies retested on dynamometers (with and without air conditioning) and their batteries will be capacity tested.

One page, vehicle fact sheets and maintenance logs have been posted for the HEVs on nearby [www](#) pages. The information includes: miles driven, fuel economy, operations and maintenance requirements, operating costs, life-cycle costs, and any unique driving issues.

The two Camry HEVs have been driven a total of 33,000 miles and the cumulative average fuel economy for the two Camry HEVs is 34.5 miles per gallon.
